## Innovation 2008

**RANGE :** Digicode®

### Digicode® innovation

This new keyless Digicode® keypad integrates a revolutionary technology based on sound analysis. Very small sensors (placed on almost any type of material) identify the location of a sound and translate it into a digital key press. No more mechanical keys...

This innovative technology and design creates many opportunities for use in special environments such as architect-designed sites, very prestigious buildings and environments where futuristic technology is appreciated. Despite its design and technology features, the keyless Digicode still offers a high level of security for the user.

### Technical specification

- Polycarbonate and stainless steel keypad.
- Audible and visual feedback.
- 1 relay output (optional 3 outputs).
- Exit button inputs (for relays 1 and 2).
- Coaxial cable.
- Free voltage:
  - 12 to 24Vac,
  - 12 to 48Vdc.

### Product features

- Keyless operation.
- Design.
- Illuminated keypad.
- Digits laser-engraved.
- Electronics housed remotely.
